

1 Tables

Table 1: DiD estimates on Topics

	Faith (1)	God (2)	Meditation (3)	Prayer (4)	Religion (5)	Spirituality (6)
<i>I. TWFE Estimates</i>						
ATT (γ)	13.564*** (1.171)	9.809*** (0.567)	9.189*** (1.601)	18.116*** (1.338)	0.972 (1.600)	-2.525** (1.249)
Mean: pre-lockdown	44.12	63.54	45.83	49.55	54.37	47.99
p-value	0.000	0.000	0.000	0.000	0.545	0.046
Observations	6,363	8,388	7,180	8,131	8,117	6,673
<i>II. BJS Estimates</i>						
ATT (τ)	15.708*** (0.781)	10.858*** (0.397)	10.176*** (0.514)	19.748*** (0.695)	2.277** (0.996)	-2.750*** (0.792)
p-value	0.000	0.000	0.000	0.000	0.022	0.001
Observations in Ω_0	5,829	7,720	6,572	7,475	7,457	6,123
Observations in Ω_1	534	668	608	656	660	550

Notes: This table reports TWFE (Panel I) and BJS (Panel II) estimates for Google Trends topics. State, year, day-of-year and dow fixed effects are included as specified in equation ?? . Clustered standard errors at the day level in parenthesis. *signifcantant 10%, **signicantat 5%,***signicantant 1%

Table 2: DiD estimates on Topics (1-week anticipation)

	Faith (1)	God (2)	Meditation (3)	Prayer (4)	Religion (5)	Spirituality (6)
<i>I. TWFE Estimates</i>						
ATT (γ)	12.629*** (1.134)	9.142*** (0.753)	6.738*** (1.417)	18.258*** (1.142)	-4.782*** (1.700)	-5.653*** (1.244)
Mean: pre-lockdown	43.90	63.33	45.90	48.98	54.82	48.13
p-value	0.000	0.000	0.000	0.000	0.006	0.000
Observations	6,363	8,388	7,180	8,131	8,117	6,673
<i>II. BJS Estimates</i>						
ATT (τ)	14.574*** (0.735)	9.949*** (0.274)	7.231*** (0.458)	19.221*** (0.465)	-3.716*** (0.799)	-5.755*** (0.739)
p-value	0.000	0.000	0.000	0.000	0.000	0.000
Observations in Ω_0	5,602	7,426	6,305	7,188	7,179	5,894
Observations in Ω_1	761	962	875	943	938	779

Notes: This table reports TWFE (Panel I) and BJS (Panel II) estimates for Google Trends topics. Treatment is redefined to start 7 days before announcement. State, year, day-of-year and dow fixed effects are included as specified in equation ?? . Clustered standard errors at the day level in parenthesis. *signifcantant 10%, **signicantat 5%,***signicantant 1%

Table 3: Heterogeneous Effects by Baseline Religiosity Level

	God (1)	Prayer (2)	Meditation (3)
ATT (γ)	10.762*** (0.619)	19.151*** (1.361)	10.068*** (1.596)
ATT ($\gamma_H - \gamma_L$)	-2.611*** (0.928)	-3.267*** (0.785)	-2.214 (1.962)
Mean: pre-lockdown	63.54	49.55	45.83
p-value: ATT	0.000	0.000	0.000
p-value: Interaction	0.006	0.000	0.262
Observations	8,388	8,131	7,180

Notes: This table reports TWFE triple-DiD estimates of the heterogeneous effect of lockdown announcements by baseline religiosity level. High-religion states are defined as those above the median share of “very religious” adults in the Gallup 2017 U.S. Daily tracking survey. γ captures the ATT for low-religion states; $\gamma_H - \gamma_L$ captures the differential ATT for high-religion states. State, year, day-of-year and day-of-week fixed effects included. Clustered standard errors at the day level in parentheses. *significant at 10%, **significant at 5%, ***significant at 1%.

2 Figures

Figure 1: Sample selection and timeline

Notes: This figure shows the exact dates considered for analysis and rescaling process, for both 2019 and 2020 timelines. Days that are not included for regression analysis but are necessary for a proper weekly normalization process are displayed in gray.

Figure 2: Topic Series: 2019 vs. 2020

Notes: This figure shows the evolution for each topic using the rescaled series for 2019 (blue) and 2020 (red). Relative days to lockdown announcement are in the x-axis. For 2019 these correspond to the paired days.

Figure 3: TWFE estimates and Covid-19 controls

Notes: This figure compares TWFE estimates as in Equation ?? both including and not including one day lagged number of confirmed COVID-19 deaths. Confidence intervals at the 95% level.

Figure 4: Pretrends test: Topics

Notes: This figure reports the pre-trends test coefficients as in ?? . Blue lines use the lockdown announcement day as beginning of treatment, whereas as red lines redefine treatment to begin 7 days before announcement. Confidence intervals at the 95% level.

Figure 5: Event Study by Baseline Religiosity Level
God

Prayer

Meditation

Notes: This figure reports event-study coefficients from separate TWFE regressions on low-religion (blue) and high-religion (red) state subsamples. High-religion states are those above the median share of “very religious” adults in the Gallup 2017 U.S. Daily tracking survey. Week -12 is the omitted reference period. State, year, day-of-year and day-of-week fixed effects included. Confidence intervals at the 95% level.

Figure 6: TWFE estimates on Subcategories

Notes: This plots TWFE estimates of each subcategory withing the 'Religion & Belief' category. Confidence intervals at the 95% level.
